

VAICO – engine & transmission parts by VIEROL

The engine and transmission are the core components of the automobile. The quality brand VAICO has earned a well-known brand name within the global independent aftermarket in these complex product areas.

VAICO has been driven by passion for quality since 1999. Supported by an experienced team of product management professionals, VAICO was initially known for chassis, steering and rubber-metal parts in high Q+ (OEM quality). Especially, the drive chains, engine and transmission oils, and the filter media among VAICO transmission and engine filters currently meet 100% of the original vehicle manufacturer's certification requirements.

With more than 19,000 quality products of over 150 different product groups, VAICO offers a wide range of high quality spare parts for timely, cost-effective maintenance. We are flexible, innovative and foresighted. As a trusted partner of our wholesale partners' workshop customers, we develop repair solutions following the theme of Expert Kits +, among others for crankcase ventilation, transmission filters, service filters, and much more.

We continuously invest in improving our logistics processes, and guarantee access to technical information as well as availability of our VAICO quality products via www.autoteile.de - around the clock. High resolution, detailed product images in 360 degree perspective allow accurate identification of product characteristics.

With VAICO you are choosing quality, durable automotive components. Learn more and give us a try!

Our core product groups

Transmission components

- High-quality filter media in original quality
- Complete repair kits including gasket, installation material, and gear oils certified by the vehicle manufacturer
- Uniform adhesion of abrasion via multipole magnets

Engine air

- Dimensionally stable, heat and weather-resistant fluororubber gaskets (FKM; earlier FPM) guarantee longevity
- Quick and easy installation of hoses using German-produced quick connectors
- Practical repair kits consisting of oil separators and associated hoses
