VIEROL AG

VIEROL AG is a successful international specialist for electronic components and engine management in the automotive sector. We supply more than 59,000 high-quality vehicle parts to 125 countries on all continents.

As an owner-managed family company with headquarters in Oldenburg, Germany and subsidiaries in Shanghai and Singapore, we guarantee mobility worldwide with our vehicle parts.

Our product range for cars and light commercial vehicle (LCV) are available on the market under brands VEMO, VAICO and ACKOJA.

We cover numerous automotive brands and models. All three brands stand for high quality, in terms of both products and customer service.

Our clients have high standards and specific requests. They expect quality spare parts and individual service. This is achieved by putting the customer first in every aspect of our work.

Specially assembled repair kits, known as EXPERT KITS+, save time in part identification and procurement.

We work constantly on new products that will make daily mobility easier and more comfortable – with intelligent repair kits and perfect alternatives to the original part.

QUALITY PARTS BY VIEROL

The times when independent garages only dealt with older vehicles are over. More and more cars with alternative drive technology are making their way to the garages. With "Green Mobility Solutions", VIEROL ensures access to vehicle parts for the maintenance and repair of electric and hybrid cars.

WE ELECTRIFY YOUR BUSINESS – with next generation vehicle parts!

Whether plug-in or full hybrids or even electric cars, alternative drive technology is advancing fast worldwide. With an extensive product portfolio in the category "Green Mobility Solutions", VIEROL AG offers retailers and garages in the replacement parts market a range that covers many different vehicle brands. Together with their colleagues from product management, the experts in the ACADEMY – VIEROL AG's development centre – draw on a broad spectrum of knowledge and expertise. This enables us to offer products from various areas for vehicles with new drive technologies, including sensors, electric motors, electronic components and mechanical parts.

Numerous systems – more than 10,000 items

The range of components and spare parts for electric and hybrid vehicles is a key technology area in our product portfolio and the core competence of our quality brands VEMO, VAICO and ACKOJA. The market for these products is growing significantly thanks to e-mobility. With Green Mobility Solutions, VIEROL ensures access to spare parts for the maintenance and repair of modern drive technologies and already supplies the independent parts trade with more than 10,000 high-quality products from this segment.

Particular mention should be made here of components for efficient thermal management, such as heat exchangers, coolant pumps, condensers, valves, electric water pumps and chillers for various vehicle applications. But also chassis components, switches for comfort systems, electrical components and sensor technology. Our EXPERT KITS+ section in particular impresses workshops with comprehensive repair solutions for professional, efficient and economical work on electric and hybrid vehicles.

TESLA OIL CHANGE

Why missing an oil change on a Tesla can have fatal consequences.

Tesla has revolutionised the automotive industry with its electrical innovations. Electric vehicles require less maintenance than conventional combustion engines. When it comes to maintenance, people often forget to change the oil in the electric motor, which Tesla refers to as the 'drive unit' and which has an integrated reduction gear.

However, regular oil changes for the drive unit are essential to ensure the long-term performance and reliability of your Tesla. With EXPERT KITS+ specially developed for Tesla oil changes, VAICO offers you a smart and reliable repair solution. Each kit contains everything you need for a quick and easy oil change: the precisely measured amount of EDF fluid, a high-quality hydraulic filter, a precise set of sealing rings and a custom-fit filler and inspection screw. Whether you have four-wheel drive or rear-wheel drive, our kits are perfectly coordinated so that you can master any challenge with confidence.

Avoid costly repairs

Even though Tesla vehicles are electric and require less maintenance than combustion engines, it is still important to keep an eye on the condition of the drive units and change the oil regularly. Proper lubrication and cooling of the electric motors and reduction gears contributes to the performance, efficiency and durability of your Tesla. In addition, performing oil changes can help identify and correct problems early to avoid costly repairs in the future. Therefore, be sure to meet your Tesla's maintenance requirements to get the most out of your vehicle..

FROM FUTURISTIC TO ERROR-PRONE?

The Tesla Model 3 represents modern electric mobility like no other vehicle: long range, powerful acceleration and a minimalist, digital vehicle concept. However, workshop practice shows that classic components such as the braking system pose new challenges.

Independent garages repeatedly report problems with the standard brake discs, particularly on the Tesla Model 3 Performance (5YJ3). Flash rust, uneven braking performance and noise not only cause uncertainty among customers, but also increase the amount of time and effort required for diagnosis and explanation in everyday garage work.

The reason for this lies in the concept of electromobility itself: Due to the strong recuperation, the mechanical brake is used much less frequently. This can lead to insufficiently released friction surfaces and increased susceptibility to corrosion – especially after prolonged periods of inactivity or in damp weather conditions.

Typical braking weaknesses in the Tesla Model 3

Common issues in the workshop

- Visible surface rust after only a short period of storage
- Fluctuating or dull braking sensation
- Squeaking or grinding noises when braking
- Complaints despite low mileage

For workshops, this means

more queries, more test drives and, not infrequently, customers wanting a sustainable alternative to the original equipment solution.

THE SOLUTION

VAICO brake discs for the Tesla Model 3

VAICO brake discs offer workshops an alternative specifically developed for the independent aftermarket. They have been specially designed to minimise the typical weak points of the original brakes while at the same time making everyday workshop life easier..

The advantages at a glance:

- Fully coated surface for significantly improved corrosion protection
- Consistent braking performance, even after prolonged periods of inactivity
- Reduced noise tendency due to even load distribution
- High accuracy of fit for quick and secure installation
- Lower complaint rate and higher customer satisfaction

Improved rust protection plays a crucial role, especially for vehicles that are mainly used in city traffic or for short distances.

CONCLUSION

Greater security, less effort

VAICO brake discs for the Tesla Model 3 provide independent garages with a reliable and economical solution to a well-known problem affecting modern electric vehicles. The combination of robust construction, improved corrosion protection and practical design ensures a noticeable increase in quality – for both garages and customers alike.

TECHNOLOGY IN DETAIL

Why VAICO brake discs are impressive

A key difference to standard brake discs lies in their design. While the friction ring in the original equipment solution is often only pressed, VAICO uses a riveted composite construction.

This design ensures:

- greater mechanical stability
- better heat dissipation
- lower stresses under thermal load

In addition, the continuous coating not only protects the pot, but also reliably protects unused areas of the friction surface from corrosion..

TRIED AND TESTED

Long-term test over 30,000 kilometres

In a practical test on a Tesla Model 3 Performance, VAICO Brake Discs were tested over a mileage of around 30,000 kilometres in everyday use.

The result:

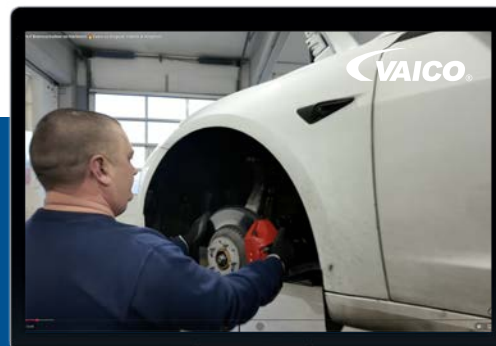

- even wear pattern over the entire service life
- Constant braking performance in different weather conditions
- No noticeable corrosion despite low mechanical brake usage

This is a strong argument for workshops: less reworking, fewer discussions – and a product that delivers in everyday use.

Jürs Lackiererei Lübeck, in collaboration with Reifen Reber, tested the new VAICO brake discs for the Model 3 Performance. See for yourself how impressive the results are.
