# VEMO

ELECTRONIC PARTS BY VIEROL

VEMO is the quality brand for high-quality electronic automotive replacement parts. With more than 15,000 VEMO replacement parts, we cover numerous models from European, American and Asian vehicle brands.

We are particularly proud of our range of sensors and switches:

VEMO offers more than 4,000 different replacement parts such as parking sensors, sensors for crankshafts and camshafts, air flow meters, steering column switches, thermal switches and much more.

Whether for sensors, switches, small engines, replacement parts for exhaust gas recirculation or products for vehicle inspections – VEMO offers the best quality. We are therefore the perfect alternative to the original part manufacturers.

We offer smart repair kits in the EXPERT KITS+ section – from practitioner to practitioner – thus also helping you to save time. The Q+ seal identifies replacement parts with OEM quality, just like those made by the original equipment manufacturers.

15 experts work every day to expand the range constantly, and to ensure continuous quality improvements for the VEMO products. Clients from numerous countries already trust us – time for you to get to know us too!

## OIL COOLERS

Oil coolers in vehicles are used to regulate the temperature of the engine oil and ensure that it remains within an optimum operating range. They play an important role in maintaining engine performance and longevity by removing excess heat.

The oil cooler is usually a heat exchanger that flows through the engine oil and transfers the heat to the ambient air. In the process, the oil is pumped through hoses or pipes surrounded by cooling fins. These cooling fins increase the surface area of the heat exchanger and thus enable efficient heat dissipation.

There are different types of oil coolers, including air-cooled and water-cooled variants. Air-cooled oil coolers use the airstream to remove heat, while water-cooled oil coolers are connected to the vehicle's cooling system and use coolant to cool the oil.

Faults or problems with oil coolers can lead to a number of problems. A common problem is a leak in the hoses or pipes, through which the oil leaks. This can lead to a loss of oil, which can affect the lubrication of the engine and lead to increased wear on moving parts.

Another possible problem is a blockage in the oil cooler. This can be caused by dirt, debris or sludge accumulating in the oil cooler and obstructing the flow of oil. Insufficient cooling of the oil can lead to overheating, which in turn changes the viscosity of the oil and reduces lubricity.

Finally, mechanical damage such as damaged cooling fins can occur. If the cooling fins are bent or damaged, the surface area of the heat exchanger is reduced and heat dissipation is impaired.

To avoid problems with oil coolers, it is important to keep regular maintenance intervals and to check the oil cooler and its components for leaks, blockages or damage. If there are any signs of problems, they should be rectified as soon as possible to prevent damage to the engine and maintain optimum performance of the vehicle.

**FROM THE EXPERT  
RECOMMENDED**

Our Expert Kits always offer a practical solution: they include seals and, for oil filter housings, the cooler and filter are expertly pre-assembled.

This saves you time and effort and provides your customers with perfect and smooth installations.

Our Expert Kits stand for first-class quality. Before delivery, they undergo a comprehensive 100% pressure and leakage test.

In addition, the contact surface is checked for flatness to ensure optimum functionality and reliability. Rely on our Expert Kits for outstanding performance.
