

BEARING BRACKET, CAMSHAFT

ENGINE-CONTROL | 11314

Function

The bearing bracket is screwed to the cylinder head. In addition to bearing the camshaft, it supplies oil to the camshaft brackets and the intake camshaft adjuster.

The camshaft bracket is equipped with a sieve that filters the oil coming from the cylinder head and therefore prevents impurities from getting into the adjusters. The camshaft adjuster magnet is attached to the camshaft bracket with three bolts in a single mounting position.

SYMPTOMS

- Reduced engine performance
- Increased exhaust emissions
- Loud engine function
- Engine check-light turns on

FAILURE CAUSES

- Clogged or dirty sieve in the bearing bridge
- Lack of lubrication in the camshaft and adjuster
- Friction in the receiving bearing for the camshafts

CONSEQUENTIAL DAMAGES

- Incorrect adjustment of the camshaft
- Engine damage

BEARING BRACKET, CAMSHAFT BY VAICO

This and other articles from the Bearing Bracket, Camshaft range can be found on www.autoteile.de

- **only in OE quality:** timing chain cover, bearing bracket, camshaft control valves and camshaft adjuster magnet
- **bearing surfaces in the highest CNC quality**
- **Also available as a practical repair set:** bearing bracket, timing chain cover, valve, central magnet and plug housing in one kit
